

COMPOSITE VIDEO FUNCTION

The enclosed Zorba Microcomputer has the added feature of being able to drive an external monitor through the composite video output jack in the rear panel. This feature has been designed to operate with several popular, readily available monitors on the market today. It will not operate with all monitors, however, and functionality should be tested prior to purchase.

While other monitors may provide satisfactory performance, the following manufacturer/models have been tested and approved by the factory for highest quality image reproduction:

MANUFACTURER

MODEL

BMC	BM-12AUW
NEC	JB-1260M (A)
SANYO	DM 2112
TRANSTAR	20

Many hours of successful computing with your new Zorba!!!
